Experience

Ultimate Kronos Group (UKG)

May 2025 - Present

Associate Software Engineer

Sunrise, FL

- Developed and maintained RESTful APIs using C# .NET Core and Java Spring Boot, applying Domain-Driven Design (DDD) principles to build scalable, maintainable backend systems aligned with business requirements
- Contributed to a large-scale enterprise database migration by designing and implementing backend solutions and building an automation tool that generated database tables and relationships for 100+ domain aggregates, reducing schema creation and migration time by 70%
- Improved API reliability and database transaction performance by implementing retry policies, refactoring transactional workflows, and converting fat events into thin, high-performance events, resolving production issues affecting enterprise customers
- Led the adoption of feature flags by integrating LaunchDarkly into an Angular frontend, enabling progressive delivery, safer deployments, and controlled feature rollouts.
- Built component-driven Angular user interfaces for internal dashboards, improving usability and accessibility while supporting incremental feature development
- Delivered end-to-end full-stack features across microservices in Agile/Scrum environments, writing unit and integration tests (xUnit, JUnit, Karma/Jasmine) to ensure CI/CD stability and high code quality

Ultimate Kronos Group (UKG)

May 2024 - Aug 2024

Software Engineer Intern

Weston, FL

- Built scalable Java Spring Boot services and APIs, incorporating Liquibase for robust database version control
- Collaborated with cross-functional teams to implement new features using Angular and Redux, enhancing both developer-facing tools and customer-facing interfaces for improved usability and functionality
- Introduced automated testing with JUnit and SonarQube, increasing test coverage by 25%
- Enhanced CI/CD processes by refining GitHub Actions workflows, reducing deployment time by 20%

Bank of New York Mellon

June 2023 - Aug 2023

Software Developer Intern

Pittsburgh, PE

- Designed interactive Angular components, improving application usability and performance
- Implemented Behavior-Driven Development (BDD) using Gherkin to align test cases with user stories.
- Collaborated with Agile teams via Jira, optimizing project tracking and task completion
- Automated testing workflows with Selenium WebDriver, reducing manual effort by 30%

Projects

SprintFlow, Academic Project | React, Spring Boot, PostgreSQL, Docker

January 2024 - May 2024

- Led the development of agile task management application, integrating React Vite for a responsive frontend and Spring Boot for backend APIs
- Secured user data with Spring Security, using JWT tokens and BCrypt encryption
- Designed and implemented CRUD API endpoints with Spring Data JPA for seamless interactions with our PostgreSQL database
- Deployed scalable backend application with Docker and validated API performance using Postman

Technical Skills

Languages: C#, Java, TypeScript, JavaScript, Python, Kotlin, SQL, Golang, Dart, C++, Solidity

Technologies: .NET Core/Framework, React.js, Angular, Spring Boot, Flask, Flutter, Express.js, Docker, AWS, Grafana, LaunchDarkly, KnockoutJS, TensorFlow, PyTorch, Bootstrap, Flask, Node.js, Android SDK, TeamCity, Unreal Engine, Unity

Databases: PostgreSQL, MongoDB, MySQL, Firebase, SQLite, Oracle Database

Testing Tools: Selenium, Jasmine, JUnit, xUnit, Cypress, Postman, GitHub Actions

Education

Nova Southeastern University

Bachelor of Science in Computer Science (Summa Cum Laude)

Davie, FL

- **Minors:** Mathematics, Cybersecurity, and A.I. Application
- **Relevant Coursework:** Data Structures and Algorithms, Operating Systems, Linear Algebra, Mobile Computing, Computer Security, Artificial Intelligence, Computer Org & Architecture, Database Systems, Object Oriented Design
